## **1.6 Consolidated Sales and Load forecast**

The consolidated Sales and Load forecast is prepared duly adding the sales and Load forecast of both the TSSPDCL and TSNPDCL. TSDISCOMs prepared sales and load forecast using modified Trend Method and the details of the approaches for sales forecast is as follows:

## **Approaches to Sales Forecasting adopted by TSDISCOMS**

### **(i) Trend Method**

This method is a non-causal model of demand forecasting which assumes that the underlying factors, which drive the demand for electricity, are expected to follow the same trend as in the past. These trends shall continue in the future except in certain categories.

The category wise & voltage wise sales forecast for all categories has been projected for the two control periods FY 2024-25 to FY 2028-29 and FY 2029-30 to FY 2033-34 by considering the following data:

The TSDISCOMs have used a modified trend method wherein the historical trends in usage have been modified based on a case to case basis based on the assessment.

### **(ii) Econometric analysis**

Econometric analysis is based on the identification of correlations between the demand for electricity and the explanatory variables. This method estimates the causal relationships between the energy consumption and the factors influencing consumption. This approach allows the explicit evaluation of the separate impacts of change factors, such as energy prices, real income, population, economic activity and other independent variables. However, under this approach, the implicit assumption is that relationships established in historical time series data and/ or cross-sectional data will persist in the future.

Out of various explanatory variables considered, State GDP and per capita income have statistically significant correlation with energy consumption. Based on the projections of the macro variables, Energy consumption levels can be estimated for next 5 years. Projecting State GDP and per capita income is complicated as they are further dependent on various economic, demographic, regulatory factors. In the absence of reliable source capturing the trend of macro variables, this approach was not carried out to project sales by the TSDISCOMS.

In view of this constraint, TSDISCOMs have felt that the modified trend method is more suitable for projection of sales and system expansion for the control period.

The provisional category wise detailed forecast is placed in the below table:

## **2.2 Power Procurement Plan**

Power procurement Plan is prepared from the above mentioned Generation sources and surplus/deficit during the year would be arrived.

The energy availability from the following sources has been considered for preparation of Power procurement Plan:

- All existing Generation sources
- Generation sources with which the licensee has signed PPA like Chattisgarh, Singareni and Thermal Power Tech.
- Other future Generating Stations including TSGENCO thermal, CGS and NCE.

Considering the above assumptions, the energy availability from various sources has been computed which is summarized in the below sections.

## Remarks

NTPC (SR) - I & II : The PPA expired by 27.09.2018. However, based on CEA/ SRPC directions as well as PPA article 12.0, the Energy is being purchased and energy has been projected up to FY 2033-34.

NLC Exp-I & II : 1. Before entering into the PPAs, the allocated Power from the TPS Plants to TSDISCOMs was declined and surrendered to MoP,GoI. However, MoP ,GoI has not considered the Telangana request and Power is being allocated to TSDISCOMs.  
 2. Generally, MoP de-allocates/re-allocates the CGS Power to the any states, when other states/beneficiary seeks such surrender quantum of Power. Since, MoP is allocating Power from the plants, TSDISCOMs are availing such Power under compulsion even if there are no PPAs.

KKNPP Unit-I & II : MoP is allocating un-allocated quota power to TSDISCOMs.

NSM Bundled Phase -II : PSAs are entered for bundled power under NSM for a term of 25 years from the date of CoD of the last unit of the Solar Power Project. Thermal power is allocated as per the allocation letter by MoP, GoI from time to time.

The total energy availability is not similar to TSDICOMS filings due to the following:

1. In CGS data, the energy availability from the Telangana Super Thermal Power Project by NTPC was arrived as per actual Telangana share (1390.813 MW) instead of earlier projections corresponding to full plant capacity of 1600 MW.
2. In NCE data, future addition for FY 2025-26 was considered @ 5% on the total solar energy availability during FY 2024-25. The same was increased @ 5% from FY 2026-27 onwards.

From the above table, it can be observed that the state is expected to experience surplus till FY 2029-30 and come in to deficit from FY 2030-31 onwards.

## Chapter 2

### TSTRANSCO Transmission Plan for 5<sup>th</sup> Control Period FY 2024-25 to FY 2028-29

August - 2023

**Transmission Plan for 5<sup>th</sup> Control Period FY 2024-25 to FY 2028-29**

## **2.1 Introduction**

The Telangana State had handled 75656 MU of Energy for the FY 2022-23 and met peak demand of 15497 MW. The total Energy may likely to increase to 105957 MU of energy and with an expectation of peak demand by 21962 MW by the end of 5<sup>th</sup> Control Period during FY 2028-29.

Handling of the above peak demand needs improvement of Transmission System within the State for which TSTRANSCO have planned certain transmission schemes.

### **Inter Regional Lines (WR-SR corridor):**

The PGCIL has started construction of Warora (Maharashtra)-Warangal (Telangana)-Maheshwaram (Telangana)-Kurnool (AP) 765 kV double circuit line and the works are in progress.

## **2.2 Transmission Resource Plan**

The objective of the Transmission Planning is to develop new Transmission Network suitably to handle the increasing demand growth in both TSSPDCL and TSNDCL and to handle Generation planning.

The purpose of Resource Plan is to present a comprehensive summary of the process, assumptions, methodology, Transmission network expansion plan and investment required to ensure necessary Transmission system suitably to meet the demand growth anticipated during FY 2028-29.

The proposed Transmission system required for the FY 2028-29 ending in the 5<sup>th</sup> Control Period is accessed for the estimated peak load of 21962 MW and additional Generation evacuation. The system studies will be carried out for the entire Peak Load of 21962 MW.

The load flow studies and short circuit studies would be carried out duly incorporating the schemes mentioned at para 2.5.

## **2.3 Assumptions and Standards considered for arriving the requirement of additional Substations, Lines, Augmentation of Power Transformer Capacities, Capacitor Banks and Reactors.**

The Substations & Lines are arrived to meet load growth and based on achievements of power sector in Telangana State from 02.06.2014. The locations for substations will depend on load growth due to domestic, commercial, agriculture, industrial and IT sector and to provide round the clock supply in the entire state of Telangana. For preparation of schemes, only tentative quantities and costs are proposed.

For Bulk Load consumers, the requirement of substation and lines, augmentation of power transformers will be considered as per the load requirement. Further, location for the substation is as per the location of the bulk load consumer such as LI Pumping Stations, Khammam Steel Plant etc. and the estimated cost is arrived based on the load requirements, voltage level of substations & transmission lines provided in extending the Power Supply.

Power Transformer (PTR) Capacities are augmented to meet future load growth, to avoid overloading of existing PTRs during peak load, to avoid load shedding and to meet exigencies in the GHMC area.

The Capacitor Banks and Reactors are proposed to maintain the voltages as per CEA Transmission Planning criteria, 2023.

The following standards are adopted from CEA Transmission Planning criteria, 2023 for conducting load flows and short circuit studies.
